

Aria

Refreshener for Splits

What is it?

ARIA is a freshener specifically designed to be inserted inside the Splits of Air Conditioning Systems. It is produced with an innovative material that does not limit the flow of the air and thus does not reduce the performance of the air conditioning system. Available in 4 different fragrances will last about 8 weeks.

How does it work?

ARIA must be placed between the filter and the evaporator of the Split; any time the system is turned on, a pleasant fragrance will be released within the room. For maximum performance we recommend to use ARIA after cleaning the filter and purifying the evaporator.

In 4 Fragrances!

AriaPlus

Refreshener for Ventilation Systems

What is it?

ARIA PLUS is a freshener specifically designed to be inserted inside forced ventilation systems. It is produced with an innovative material that perfumes the air and also eliminates unpleasant odors. It will last for about 8 weeks.

How does it work?

ARIA PLUS must be placed after the filter of the forced ventilation system; any time the system is turned on, a pleasant fragrance will be released within the interiors. For maximum performance we recommend to use ARIA PLUS after changing the filters of the system.
