- 14 Technical specification

**The Kaisai brand offer consists of modern and reliable products that provide comfort and meet the expectations of the specifics of the HVACR market, dedicated to both business customers and end users.**

Through years of investment in technology, Kaisai equipment is recognized as one of the most innovative air conditioning solutions for public facilities and residential buildings.

Kaisai's portfolio includes state-of-the-art renewable energy solutions, including heat pumps, heat recovery recuperation units and photovoltaic products. The brand's portfolio also includes wall-mounted, multi-split, cassette, duct, floor-ceiling, console and portable air conditioners.

# HIGH-CAPACITY HEAT PUMPS

Compact reversible air-to-water heat pumps for **space heating and cooling and domestic hot water production**. Ideal for new buildings or replacement of existing heating systems, also in combination with an existing heat source.

## GWP = 675 **Global warming potential**

The heat pumps use environmentally friendly R32 refrigerant, with a low global warming potential (GWP=675) in accordance with the European F-Gas Directive, which aims to gradually reduce the use of greenhouse gases.

### Eco-friendly

R32 has one of the lowest GWPs on the market at 675, does not deplete the ozone layer thanks to an ODP of 0.

### Cost-effective

Compared to R410A, R32 refrigerant is more energy efficient, so less charge is needed in the system.

### Safe

R32 refrigerant has low toxicity and low flammability - it poses no threat to life and health even in the event of a system leak.

REFRIGERANT  
**R32**

**67%**

**Lower global warming**  
impact compared to R410A

\* with reference to the Fourth ICCP Report

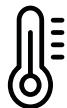

## 24/7 comfort management

Kaisai offers **reliable solution for managing comfort** in all seasons, with maximum attention to energy saving.

## Option to connect multiple devices

Possibility of cascading up to 16 heat pumps and controlling up to 256 heat pumps via MODBUS.

## Water temperature

Water temperature **for central heating up to 65°C and hot water up to 62°C** (using an electric heater up to 70°C).

## EVI system

Use of **EVI system to improve heat pump performance** especially in lower outdoor temperature ranges.

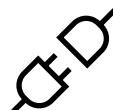

## Wide range of applications

- Residential facilities
- Industrial facilities
- Commercial facilities
- Health care

## Safety

R32 refrigerant has low toxicity and low flammability [Class A2L] - it does not pose a threat to life and health even in the event of a system leak.

## Plug&Play

The solution is compact and easy to install. The user receives a complete, hermetic, ready-to-use device that does not require the installation of a cooling system.

## Wide range of operation

Thanks to modern technology, heat pumps operate over a very wide range of outdoor temperatures [heating mode -25°C ÷ +43°C] and achieve high temperature parameters for the heating system or domestic hot water.

# ARCTIC POWER SERIES HEAT PUMPS

## Legal regulations:

The units comply with the ERP Directive (ordinance no. 813/2013), extending the existing minimum seasonal energy efficiency requirements for heating operation (SCOP).

## Maximum performance levels

A heat pump recovers much of the energy from the outside environment. It uses the heat exchange between the environment and the water in the system to provide thermal energy to heat or cool the interior of a building or preparing domestic hot water. Due to its design and technology, the heat pump has high efficiency at both full load and part load.

## Regulation on F-gases

The use of R32 refrigerant in Kaisai heat pumps makes it possible to reduce CO<sub>2</sub> emissions into the atmosphere and thus contribute to the reduction of the greenhouse effect, according to the F-gas regulation.

# HIGH CAPACITY HEAT PUMPS FEATURES AND FUNCTIONS

Kaisai's high-powered heat pump is an ideal solution for retrofitting existing installations, including those with traditional radiators.

**THE CONTROLLER HAS THREE ACCESS LEVELS**

User  
Service  
Design

## Electronic controls

The controller, complete with display, can be connected to the BMS via the RS485 serial interface (Modbus RTU protocol). This functionality **allows the display of all the process variables of the unit, access to the configuration of the operating parameters and their modification**. For technical support, it is possible to access the management parameters of the unit after entering a password (access only for authorized personnel).

## Electronic expansion valves

Electronic expansion valve **for precise control of refrigerant flow and a second electronic expansion valve for the EVI** (enhanced vapor injection).

## Brushless DC fan motor

**Integrated and miniaturized control electronics** eliminate losses due to motor slippage and ensure that the motor operates within the optimum speed range.

NIGHT-TIME  
MODE

## Energy saving and simplified operating system of the device

A heat pump is an **excellent and efficient replacement for a traditional gas boiler** that also provides water cooling during the summer. This solution eliminates the need for two separate heating and cooling systems.

## Operation at low outdoor temperatures down to -25°C

**Kaisai high-capacity heat pumps are the ideal solution for any region**, as they are able to operate efficiently regardless of climatic conditions, even in the most demanding regions.

## Cu/Al coil

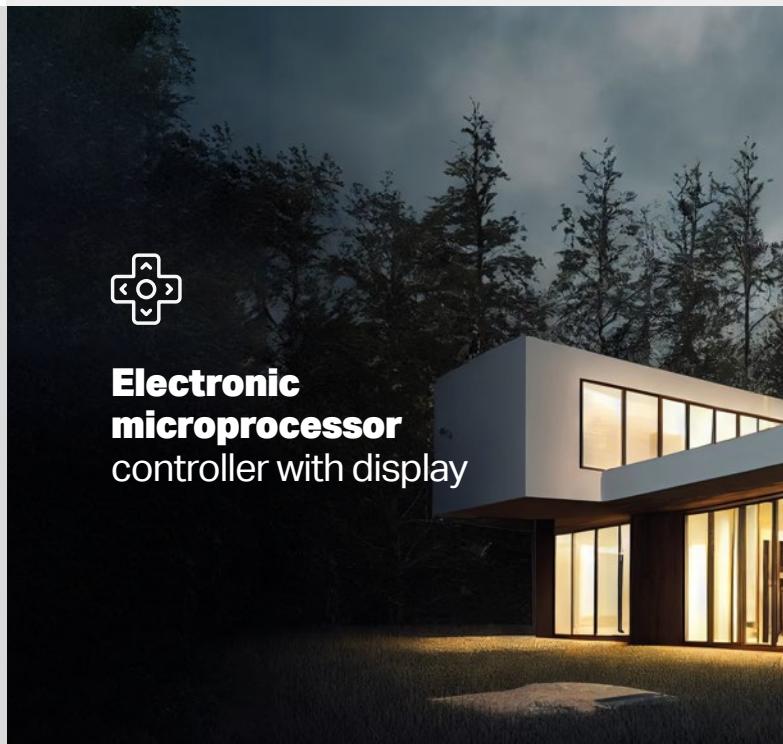

- **with hydrophilic coating** to facilitate drainage of water from the exchanger
- **with a jacket for increased** resistance to corrosive agents

## Inverter compressor

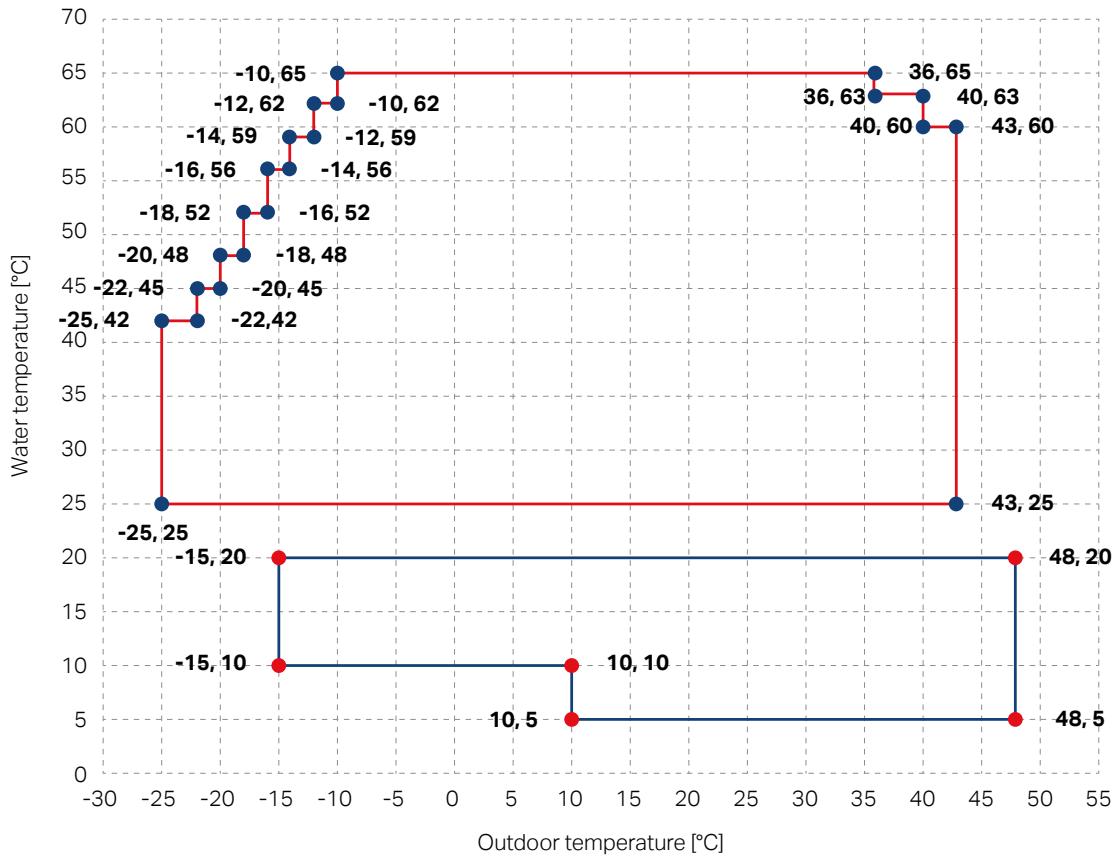

- 1 compressor dedicated to 65kW, 74kW heat pump
- 2 compressors dedicated to 110kW, 140kW heat pump

**Electronic microprocessor controller with display**

## Wide operating temperature range and advanced features

- Hot water range
- Cold water range

### Functions managed by the controller:

✓ Preparation of domestic hot water

✓ Limitation of maximum electrical power from 40% - 100%

✓ Weather curve – changing the set point in relation to the outside air temperature

✓ Hybrid system management

✓ Night-time mode

✓ Silent mode

## **Management of domestic hot water (DHW) preparation**

A controller built into the unit can regulate the operation of an external 3-way switching valve to prepare hot water in response to demand, which can be controlled by a thermostat or a sensor installed in the technical tank (not supplied). **The appliance has 3 operating modes.**

### **Mode 1**

**Cooling**

**+**

**DHW preparation**

### **Mode 2**

1. Measured in accordance with the standard: EN12102-1. outdoor temperature: 35°C DB. EWT 12°C, LWT 7°C.
2. Outdoor temperature: 35°C DB. EWT 12°C, LWT 7°C. Sound pressure level is the average measurement obtained in a semi-anechoic chamber, at a distance of 1 m from the front of the unit for all four walls and at a height of  $(1+H)/2$  m (where  $H$  is the height of the unit) above the floor. During normal operation, sound pressure levels may be higher due to ambient noise.
3. For water temperatures below 5 °C, an antifreeze is required.
4. The electric heater of the storage tank is not an accessory.

**Abbreviations used:**
**HC:** Total heating capacity (kW)

**CC:** Total cooling capacity (kW)

**PI:** Power consumption (kW) **LWT:** Leaving water temperature (°C)

**DB:** Outdoor temperature as indicated by a dry thermometer (°C)

Performance specifications measured for a water pump operating at nominal flow rate

#### Abbreviations used:

**HC:** Total heating capacity (kW)

**CC:** Total cooling capacity (kW)

**PI:** Power consumption (kW) **LWT:** Leaving water temperature (°C)

**DB:** Outdoor temperature as indicated by a dry thermometer (°C)

Performance specifications measured for a water pump operating at nominal flow rate
